

How to use Google Colab

<https://github.com/Huafeng-XU>

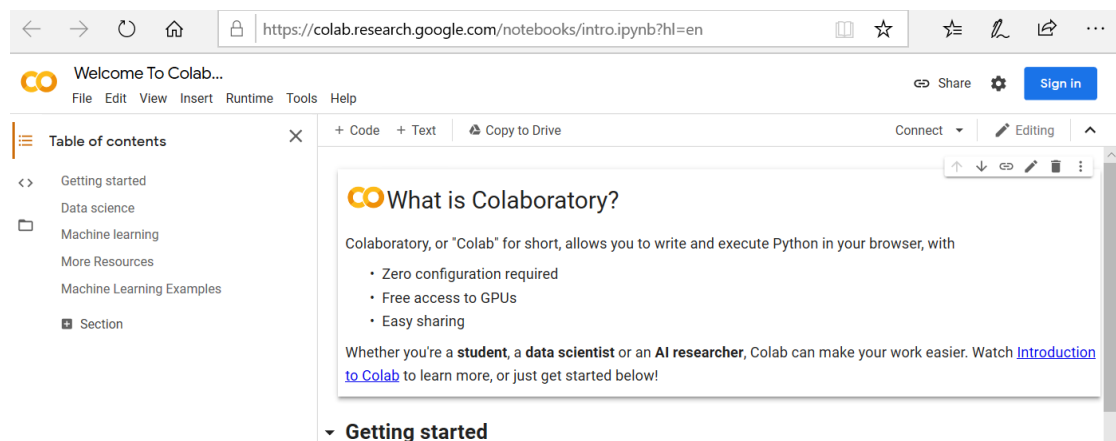

● Why we need Google Colab

Want to start Machine learning, but limit to the computer. Now, Google Colab can give you a hand.

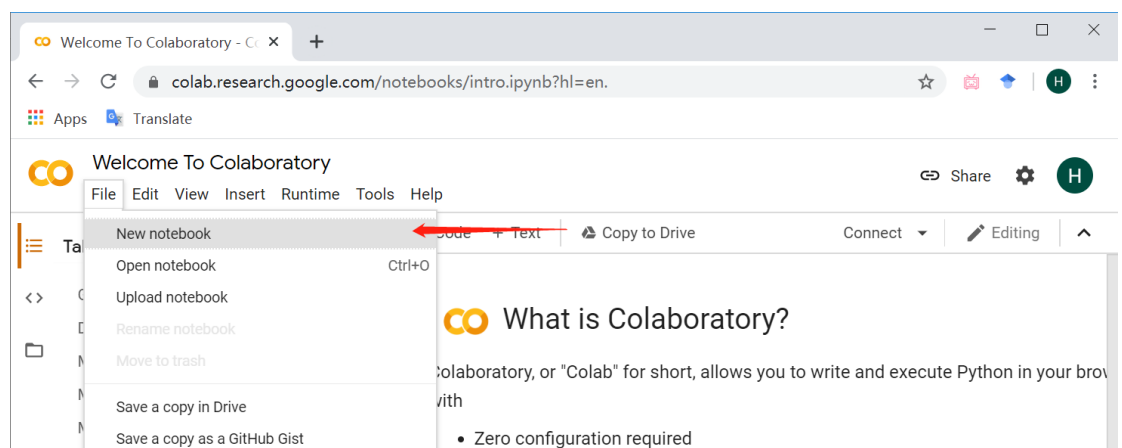

Follow the step, I help that you can get familiar with the Google Colab.

● Using python to run CNN in Google Colab.

- **Step 1:** Go to <https://colab.research.google.com/?hl=en> . I advise you to use **Google Chrome** to open this link.

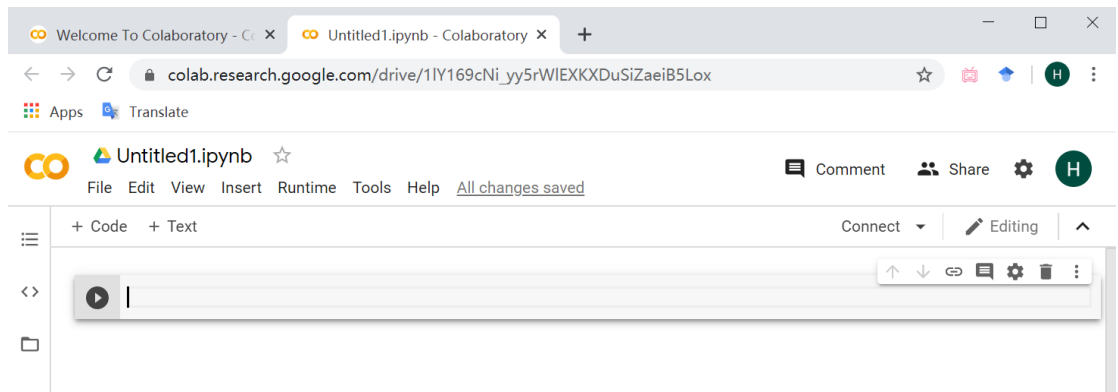

- **Step 2:** Sign in with you google account (top right corner). Create a google account if you do not have one.
- **Step 3:** Create a new Python 3 notebook by selecting “File” → “New notebook”.

<https://github.com/Huafeng-XU>

- **Step 4:** You can add a code cell by clicking the “+Code”. You can add a text to illustrate the code by clicking “+Text”.

- **Step 5:** Run the following code to print “Hello World”.

- **Step 6:** Use **GPU** by selecting “Edit” → “Notebook settings”. Change the hardware accelerator from “None” to “GPU” and then save it. Then, you can run the code by **GPU**.

Notebook settings

Hardware accelerator

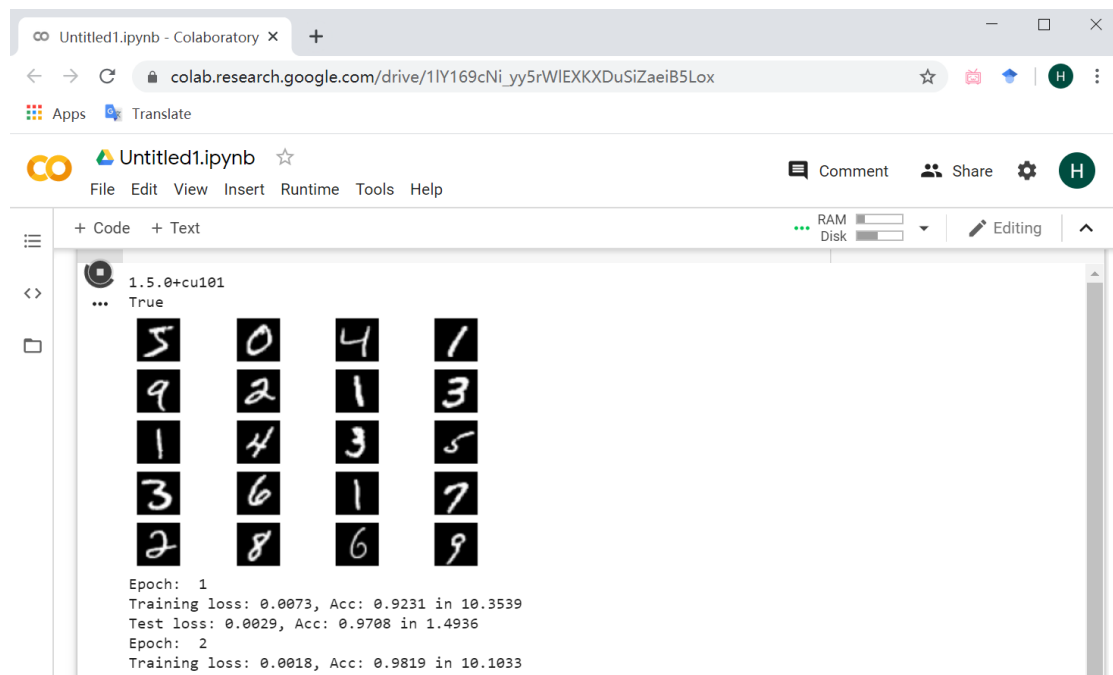

GPU

To get the most out of Colab, avoid using a GPU unless you need one. [Learn more](#)

☐ Omit code cell output when saving this notebook

CANCEL SAVE

- **Step 7:** Using python to run CNN for recognize MNIST in Google Colab. Download the code from my GitHub: <https://github.com/Huafeng-XU/CNN-Mnist-in-Google-Colab/blob/master/CnnForMnist.py> . Copy and paste it in the code space. Then you can run it to get the result.
